Application No.: 10/037,480 Response to Office Action Mailed: April 11, 2007 Response Electronically Filed October 5, 2007

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the Application:

1-35. (Canceled)

- 36. (Currently amended) A patch comprising: a non-occlusive backing liner and an inner liner, wherein the backing liner and the inner liner define a reservoir, the patch containing a formulation prepared by suspending or dispersing penetrants in a polar liquid in the form of fluid droplets surrounded by a membrane-like coating of one or several layers, said coating comprising at least two kinds or forms of amphiphilic substances with a tendency to aggregate, wherein said at least two substances differ by at least a factor of 10 in solubility in said polar liquid, wherein said penetrants are able to transport agents through the pores of an adaptable semi-permeable porous barrier or enable agent permeation through the pores of said barrier after penetrants have entered the pores, wherein the barrier is skin or mucosa of a mammalian body or cuticle of a plant, the pH of the formulation is between 3 and 10, and wherein the formulation is present in an amount corresponding to a desired dose per area; and

 a non-occlusive backing liner and (a) an inner liner, wherein the backing liner and the inner liner define a reservoir; and/or (b) a matrix layer.
- 37. (Previously presented) The patch according to claim 36, wherein the inner liner prevents unwanted release of the formulation from the patch during storage and enables rapid skin wetting when contacted with the skin.
- (Previously presented) The patch according to claim 36 wherein the non-occlusive backing liner exhibits a mean vapor transmission rate (MVTR) of more than 1000 g/m²day.

Application No.: 10/037,480

Response to Office Action Mailed: April 11, 2007

Response Electronically Filed October 5, 2007

 (Previously presented) The patch according to claim 36 wherein the penetrant flux across the barrier is controlled by the solvent disappearance across the non-occlusive backing liner

- (Previously presented) The patch of claim 36 wherein the non-occlusive backing liner has pores of smaller than 100 nm.
- 41. (Previously presented) The patch of claim 36 wherein the non-occlusive backing liner comprises a polyurethane membrane, a polyester track-etched porous membrane, a polycarbonate track-etched porous membrane or a polyethylene microporous membrane.

42-121. (Canceled)
